RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Dimensions: 9.4in. x 7.2in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1921 Excerpt: . . . for potatoes; 1s. for mangolds; 17s. for sugar mangolds (with 13 per cent. sugar); 6 8s. for maize; and 4 17s. for rice. Evidently a very cheap form of carbohydrates would be necessary to enable alcohol to be supplied at a cost which would compete with that of petrol. Maize, for instance, would have to come down from about 20 to 4 8s. per ton to compete on the above basis. It is calculated! that alcohol can be retailed at 2s. per gallon from plants and trees in Papua. Chem. and Met. Eng. , 1917, Vol. 9, p. 612. t Brit. Assoc, 1920. t Times Trade Supplement, 12th June, 1920. Both on the ground of cost and on that of supply, it is evidently necessary to consider the vegetable materials which are prolific in growth and which yield a high percentage of alcohol on fermentation. It has frequently been assumed that it is only in tropical and subtropical countries that vegetable substances can grow sufficiently profusely to be worthy of study. Capt. Desborough quotes figures, however, which show that root crops are more prolific in a temperate climate, and he urges the reclamation of land in this country for the production of crops from which alcohol may be obtained. Experiments in this direction are in progress at the R. N. Cordite Factory, Holton Heath. Vegetable Sources of Alcohol. The vegetable materials from which alcohol may be obtained are (1) products containing sugar such as molasses, mowra...
